The Herrin Coal deposit is known for its thickness and variations in coal quality. This map highlights the depth of the coal deposit in Randolph County, Illinois. The depth ranges from shallow to quite deep, reflecting the complex geology of the area. The county coal map series includes data from various sources, such as public and private records, with varying degrees of completeness and accuracy. It is important to consult the references provided for detailed information on the coal resources. The map was created on October 26, 2019, and is intended to aid in resource management and planning for the coal industry.
