The Herrin Coal Elevation Map shows the elevation of the Herrin Coal seam, which is one of the most important coal seams in Illinois. This map is useful for understanding the geographic location, type, and elevation of the coal seam. The elevation data is derived from various sources, including geological surveys and field data. The map is intended for use by professionals in the mining industry, as well as for educational purposes. For more detailed information, please refer to the source cited in the map legend.
