Springfield Coal Elevation
WOODFORD County

The Springfield coal has been mined for well over 100 years. The deposits consist of Springfield coal that is stratigraphically older than the Peoria and have been deposited in the Illinois Basin, west of the Sangamon embayment. The coal is distributed in the surface and subsurface areas of the county and contains coal and sub-bituminous coal. The coal has been used for fuel in the county and has been coal-fired power plants and coal-fired power stations. The coal is distributed in the surface and subsurface areas of the county and contains coal and sub-bituminous coal. The coal has been used for fuel in the county and has been coal-fired power plants and coal-fired power stations.

**Map Explanation**

The maps and data therein have not been reviewed and approved by the Illinois State Geological Survey. Consequently, the accuracy of the interpreted features shown in these files is subject to the limitations of the data and varies from place to place. However, these interpretations are based on data that may vary with respect to accuracy and completeness. The interpretations are not intended to be used for geologic or geologic purposes. The data files are under review and may not meet the accuracy standards of the Illinois State Geological Survey. Consequently, the accuracy of the interpreted features shown in these files is subject to the limitations of the data and varies from place to place.
