The Springfield Coal Thickness map for HAMILTON County shows the distribution and thickness of coal deposits in the area. The map includes various layers of geological data, such as soil types, land use, and topography, which are superimposed on the coal thickness data. The coal thickness is color-coded for easy interpretation, with different shades indicating varying levels of coal thickness. The map is designed to provide a comprehensive view of the coal resources in the county, which is useful for planning and development purposes. The map is based on data collected by the Illinois State Geological Survey and the University of Illinois, and it is intended for informational use only. The accuracy of the data may vary, and users are advised to consult with the data providers for more detailed information.
