SURFICIAL GEOLOGY OF HENRY COUNTY, ILLINOIS

Richard C. Anderson and Xiaodong Miao

QUATERNARY DEPOSITS

Cahokia Formation (Edwards facies 2)

Henry Formation, (Edwards facies)

Alluvium deposits

Pre-Quaternary Deposits

Illinois State Geological Survey.

Description

Pre-Quaternary deposits are divided into three main categories: bedrock near the surface, glaciofluvial outwash sand in some localities. Eolian in origin on a series of terraces that constitute the erosion valley sides with only one erosion surface. Mostly Peoria Silt, Windblown loess in natural human activity, usually coal mine}

Illinois State Geological Survey.
