**Introduction**

This Illinois Preliminary Geologic Map (IPGM) is a lightly edited product, subject to less rigorous review than the final product. It is intended for use by the public but may not reflect current regulatory decision making.

**Economic Geology**

The IPGM is designed to show bedrock geologic features in terms of geologic units and formations, with a focus on economic geology. The map shows the location of important economic minerals, such as coal, uranium, and iron, and highlights areas with potential for future mining and mineral exploration.

**Bedrock Geology of Prairietown Quadrangle**

**Mercer and Madison Counties, Illinois**

This Illinois Preliminary Geologic Map (IPGM) is a lightly edited product, subject to less rigorous review than the final product. It is intended for use by the public but may not reflect current regulatory decision making.

**Economic Geology**

The IPGM is designed to show bedrock geologic features in terms of geologic units and formations, with a focus on economic geology. The map shows the location of important economic minerals, such as coal, uranium, and iron, and highlights areas with potential for future mining and mineral exploration.
